

How to Setup iCloud

Get iCloud up and running on your iPhone, iPad, or iPod touch.

1. Make sure your device is running iOS 5.

To update to iOS 5, just connect your device to your Mac or PC and follow the onscreen instructions in iTunes. (Requires iTunes 10.5.)

2. Turn on iCloud.

When you turn on a new iOS device or after you've completed the update to iOS 5, follow the onscreen instructions to activate your device and set up iCloud.

If you skipped the setup process or want to change your iCloud settings, tap the Settings icon on the Home screen and select iCloud.

Want to use a different Apple ID for iTunes?
An Apple ID is the email address you use as a login for just about everything you do with Apple, including using iCloud to store your content, buying songs from the iTunes Store, and downloading apps from the App Store.

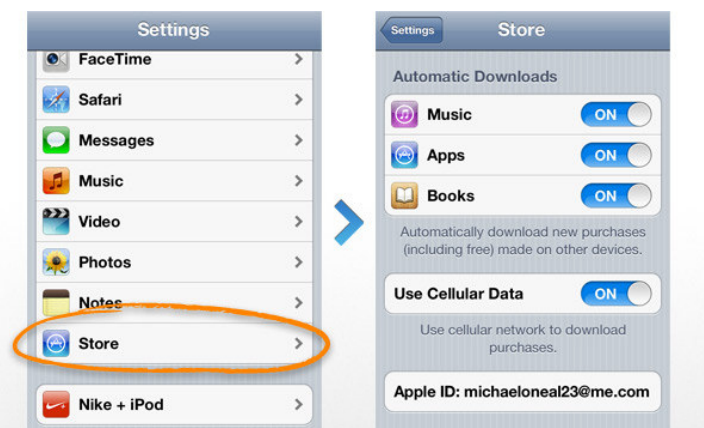

When you set up your iPhone, iPad, or iPod touch, you use the same Apple ID for iCloud services and purchases on the iTunes Store, App Store, and iBookstore. You can use one Apple ID for iCloud services and another Apple ID for store purchases.

3. Customize your settings.

Tap the Settings icon and select iCloud. Tap the On/Off switches to enable individual iCloud services, including Photo Stream, Documents, Find My iPhone, and more.

To enable Backup, tap Storage & Backup, then switch on iCloud Backup.

4. Enable automatic downloads.

To enable automatic downloads for your music, apps, and books, tap the Settings icon on the Home screen and select Store.
